

A1
4. (AMENDED) A method according to claim 1, wherein said service trigger information is a CAMEL subscriber information.

6. (AMENDED) A method according to claim 1, wherein said trader function comprises a function for searching an IN service on the basis of a subscriber language and/or service attributes.

A2
7. (AMENDED) A method according to claim 1, further comprising the step of performing a rerouting to an actual location of said IN service, when said IN service is not available at the location indicated by said location information.

A3
13. (AMENDED) A method according to claim 11, wherein said checking step is performed in a mobile switching center (MSC).

14. (AMENDED) A method according to claim 11, wherein said service trader function (**STF**) is arranged to obtain a service controller address of an IN service in a visited network based on a home service controller address of said IN service, when said IN service is downloaded from the home network to said visited network.

15. (AMENDED) A method according to claim 11, wherein said service trader function provides a function for selecting a voice service information.

20. (AMENDED) A system according to claim 18, wherein said information element is stored in said home location register (**HLR**).

A4
21. (AMENDED) A system according to claim 18, wherein said information element is a transparent data block only interpretable by a service logic of said IN service of a visited network.

A4
22. (AMENDED) A system according to claim 18 , wherein said information element comprises an address and a service key which identifies a service logic of said IN service in the home network.

A5
24. (AMENDED) A system according to claim 16, wherein said service trader means (**STF**) is arranged in the home network of a mobile subscriber to which an IN service is to be provided.

A6
25. (AMENDED) A system according to claim 16, wherein said update service trigger information comprises an address information of a service controller to be contacted in case said IN service is not available at the location indicated by said checking result.

A7
29. (AMENDED) A system according to claim 26, wherein said service trader means (**STF**) is arranged as a separate network element.

A8
33. (AMENDED) A network element according to claim 31, wherein said checking request is received from a CSE of the GSM.

A9
36. (AMENDED) A service controller according to claim 34, wherein said service invocation is an Initial Detection Point message.
